

Configure Continuous Delivery to Azure

Start a build and release now or whenever you check in code.

Select a Repository Branch

Repository: ASX

GitHub PAT:

Branch: master

Select a VSTS Team Project

Team Services Domain: hgouw.visualstudio.com

Team Project: ASX (new)

Select Target Azure Resources

Subscription: Visual Studio Enterprise

Host type: Azure Function

Azure Function App: ASX-dev-as (new) [Edit...](#)

Enabling continuous delivery will:

Create an Azure Function app with the Y1 Service Plan

Create a Standard LRS Azure storage account

Create a build definition on Visual Studio Team Services that targets the selected repository.

Create a release definition targeting your selected Azure App Service

Visual Studio Team Services continuous delivery is a free service
